Release 1.0.6.dev3+ng826d100

April 20, 2016

1	about deprecate	3
2	Basics	5
3	Api	7
4	Indices and tables	9
	Python Module Index	11

Contents:

about deprecate

The deprecate library provides decorators and primitives to support API deprecation and experimentation.

The goal is to support rich and documenting deprecation of API's as projects move towards new needs.

Basics

TODO!!

Api

`deprecate.deprecated (func=None, **kw)`

Mark deprecated functions with this decorator.

Attention! Use it as the closest one to the function you decorate.

Indices and tables

- `genindex`
- `modindex`
- `search`

d

deprecate, [7](#)

D

`deprecate` (module), [7](#)

`deprecated()` (in module `deprecate`), [7](#)
